### **Upgrade of Best Selling Data Logger**

Elcomponent's market leading energy data logger, the SP MAX, is now available with flex type CTs for improved ease-of-use in difficult locations.

The SP MAX features safe voltage connection via a standard wall socket, but has previously only been available with clip-on type CTs. The new flex CTs not only offer excellent value for money, as they extend the operating range of the logger, they also offer trouble-free installation in areas where standard CTs cannot be used. Until recently, high quality flex transducers have also been high-cost, but Elcomponent says this problem has now been overcome, and the SP MAX is offered complete with 3 off 200/1000A switchable flex CTs for just £1495.00. The kit is supplied in a custom zip bag, and includes all necessary accessories including 'PowerPack' PC software.
