

ELCOMPONENT

Making sense of your energy

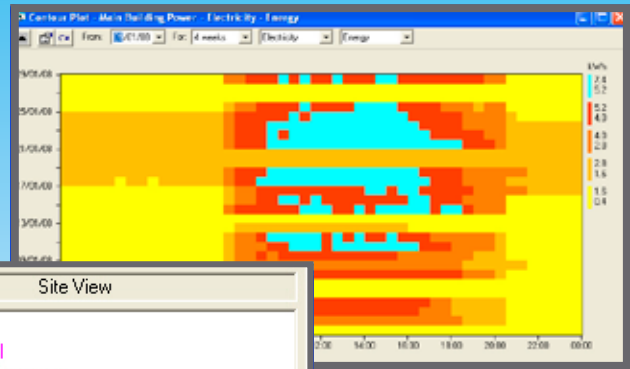

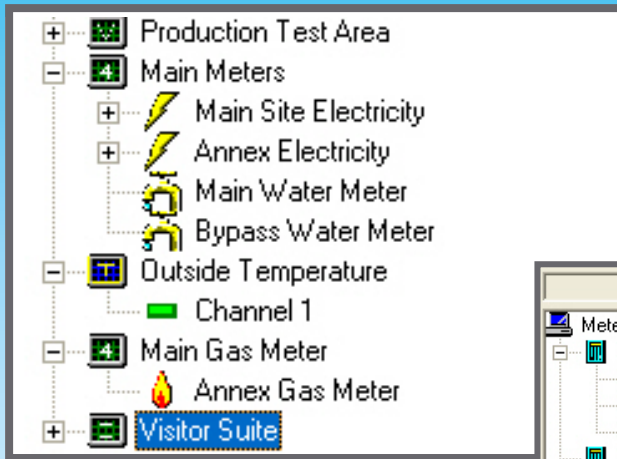

Flexible, cost-effective aM&T

MeterRing MM is one of the few truly integrated aM&T packages. It offers end-to-end functionality in a single product, and is suitable for sites of all types and sizes.

Well-proven across hundreds of installations, MeterRing MM utilises Elcomponent's wide range of Automatic Meter Reading (AMR) hardware to provide reliable and cost-effective AMR functionality in virtually all environments.

The software handles all data collection and storage duties as well as providing very comprehensive M&T functionality delivered via a friendly and intuitive user-interface. It uses MS SQL as its primary database and is therefore instantly compatible with most IT environments. It is available in a number of different packages to suit all applications and budgets, and represents excellent value for money at all levels.

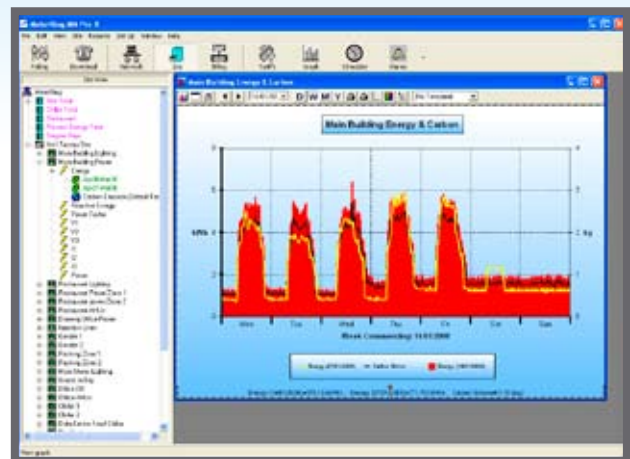

DATA COLLECTION

MeterRing MM gives you the choice when it comes to data collection. It interfaces seamlessly with all our AMR hardware to ensure that the system as a whole delivers the highest possible performance and reliability at the lowest possible cost.

It's compatible with our Ethernet, VHF & UHF radio, RS485 and GSM/GRPS networks, all of which have been fully tested across many different applications.

Most AMR systems benefit from the use of a combination of technologies to deliver the most cost effective performance, and MeterRing is ideal in this respect as it can be configured to suit the application, rather than the other way around!

FULL M&T FUNCTIONALITY

MeterRing has won many plaudits for its exceptionally intuitive user interface, but this doesn't mean that it's a basic package. Far from it in fact, as it offers a full suite of M&T functions including:

- Flexible graphic data browsing
- On board tariff package
- Carbon calculation
- Full alarm suite including profile alarms
- SMS & e-mail messaging
- Tenant billing option
- Flexible KPI calculator package
- Web upgrade option

WEB UPGRADE

MeterRing also combines with our web-based 'MeterWeb' software to provide a full 'Enterprise' package for sub-metering multiple sites, or adding a web interface to a site based aM&T system. With MeterRing handling the data collection and transfer duties the user gets the best of both worlds. A reliable AMR package with a powerful site based M&T interface, as well as a web-based package providing energy, carbon, and cost information tailored for users at every level within the organisation.
